

Kevin Rhys Sadueste

SDET | Software Test Automation & Code Coverage | Agentic AI

Kevin.sadueste@gmail.com | +65-9725-5686 | linkedin.com/in/kevinrhys | Singapore

PROFESSIONAL SUMMARY

SDET and Software Engineer with 13+ years of progressive QA and test automation experience across banking, financial services, and fintech. At Visa Worldwide, progressed from Senior Software Test Engineer to Software Engineer – Sr. Consultant, architecting VTAF, a unified test automation framework covering UI, REST, and SOAP layers within a Java/JVM and Python microservices-based global payments dispute resolution platform. Brought AI into the team's testing workflow by integrating GenAI/LLM tooling into CI/CD pipelines (Jenkins, GitHub Actions) for automated root-cause triage and coverage gap detection. ISTQB Certified (Advanced Level, both streams), with Scrum Master experience leading and mentoring cross-functional teams of 7+.

PROFESSIONAL EXPERIENCE

Software Engineer – Sr. Consultant — Visa Worldwide Pte. Ltd.

February 2025 – Present | Singapore

- Extended VTAF with an integrated AI agent layer (via MCP) that automatically fetches application logs and cross-references source code to triage failed tests, classifying each as a real bug, script issue, bad data, or environment problem, so the team could move straight to fixing instead of manually triaging every failure.
- Built the agent's knowledge base as a set of Markdown-based skill files consolidating years of JIRA tickets, user stories, documentation, schemas, and historical execution logs, giving the agent the domain context needed for accurate root-cause diagnosis.
- Extended the same agent with a Claude Skill that reads code coverage reports and automatically generates automated test cases for uncovered code paths, increasing overall code coverage by 14 percentage points across Java/JVM and Python microservices codebases.
- Validated Kafka consumer/producer flows as part of the platform's messaging layer, ensuring data consistency across asynchronous service-to-service communication.
- Tested AI-powered systems (document analyser, chatbot) through LLM version upgrades using an established evaluation criteria, running regression suites alongside output quality assessments to catch accuracy and relevance degradation before rollout.
- Made the entire system accessible team-wide through a Microsoft Teams chatbot, adopted by multiple teams to trigger regression suites, smoke tests, or custom script runs, plus invoke the triage and coverage-generation agents, directly from chat.
- Built a Jenkins pipeline running Checkmarx SAST/DAST and Sonatype SCA scans, fixing flagged security issues and gating unit, regression, and E2E tests through to production deployment.

Staff Software Test Engineer — Visa Worldwide Pte. Ltd.

August 2022 – February 2025 | Singapore

- Architected and maintained VTAF, a unified Java/TestNG/Cucumber BDD framework covering UI (Playwright/Selenium), REST/SOAP API layers, and Kafka consumer/producer flow validation for a global payments dispute resolution platform.
- Built and maintained CI/CD pipeline workflows across Jenkins and GitHub Actions, supporting automated test execution and deployment gating.
- Served as Scrum Master for a cross-functional agile team of 7+, mentoring junior QA engineers, conducting code reviews, and driving sprint delivery.

Senior Software Test Engineer — Visa Worldwide Pte. Ltd.

February 2019 – August 2022 | Singapore

- Maintained comprehensive BDD regression coverage across fraud disputes, pre-arbitration, pre-compliance, VDI score validation, RTSI endpoint regression, queues, and reporting flow.

Automation Engineer — Fluor Daniels Inc

October 2017 – February 2019 | Philippines

- Designed and delivered a hybrid automation framework unifying scripts across all projects using UFT.

Test Analyst / Automation Lead — Macquarie Philippines

December 2016 – October 2017 | Philippines

- Built a new automation framework using Ranorex, establishing team-wide automation standards and guidelines.
- Executed functional, performance, and regression testing on a desktop-based stock trading application in Agile methodology.

Quality Analyst – Automation — Citco Group of Companies

August 2015 – December 2016 | Philippines

- Built a test library architecture from scratch using UFT descriptive programming, maximizing reusability and maintainability across fund administration projects.

Quality Engineer — Misys Philippines (now Finastra)

June 2013 – August 2015 | Philippines

- Tested core banking web and desktop applications (functional, UI, API) within Agile teams.

CORE SKILLS AND TECHNOLOGIES

AI / Agentic Tooling: MCP (Model Context Protocol), Agent Skills, Claude Code, Codex, Copilot Studio, Power Automate

Test Frameworks: Cucumber BDD, Playwright (Java), Selenium (Java), TestNG, JUnit, UFT/QTP

API / Integration: REST, SOAP/WSDL

Messaging & Queues: Kafka (consumer/producer flow validation)

Languages: Java, Python, SQL

Systems & Networking: Linux, Windows, TCP/IP, HTTP, JVM, Kubernetes, Bash

Cloud: Azure (architectural exposure)

Build and CI/CD: Maven, Jenkins, GitHub Actions, Git

Code Coverage: JaCoCo (Java), Slipcover (Python), SonarQube, GitHub Pages (Dashboard)

EDUCATION

Bachelor of Science in Computer Science — University of the Philippines

CERTIFICATIONS

- ISTQB Certified Tester – Advanced Level, Technical Test Analyst
- ISTQB Certified Tester – Advanced Level, Test Analyst
- ISTQB Certified Tester – Foundation Level
- Professional Scrum Master I (PSM I) – Scrum.org
- Certified Scrum Product Owner – Scrum Alliance
- AI and Machine Learning Begins With Me – NUS
- Introduction to RapidMiner AI/ML – NUS
